

Two Step Equations

Two step – two step – two step equations
Two step – two step – two step equations
You gotta be fair – you gotta take care
You gotta do the same thing to both sides

Use the opposite operation – on both sides of the equation
With careful calculation – find the variable's information

The constant is first – the operations are reversed
If you are adding – then subtraction's the inverse
Next it's so efficient – deal with the coefficient
When it says to multiply – division is sufficient

When the variable's on one side –
And the numbers are combined
You've got it all sorted
And the answer you will find.

Use the opposite operation - on both sides of the equation
With careful calculation - find the variable's information

You gotta be fair – you gotta take care
You gotta do the same thing to both sides
Two step – two step – two step equations
Two step – two step – two step equations
You gotta be fair – you gotta take care
You gotta do the same thing to both sides
